## Valve Cleaning Brush Instruction

Your NEW LatherKing includes a cleaning brush intended to clear out minor blockages of soap residue in the valve opening. Occasionally, regular maintenance of your LatherKing is required to keep the interior mechanism and valve clean and operating in satisfactory condition (as indicated in your User and Care Guide). Soap can build up through normal use and using Campbell's Cleaner will keep the pathways clear of obstruction. If needed, the cleaning brush can be used to clear any blockage in the valve not resolved through normal maintenance.

Simply remove the cover from the soap reservoir, turn off the power and insert the cleaning brush into the top of the valve opening **WHILE DEPRESSING THE ACTIVATION LEVER**. **Slowly slide the brush up and down several times until the obstruction is clear**. Turn the power on and cycle the machine.

Keeping your LatherKing clean and free of soap build-up will ensure years of satisfaction for you and your customers!

4. Slowly Slide Brush Up and Down

# Latherking

Congratulations on your recent purchase of the Latherking Model MFS Hot Lather Machine. Latherking has been the most recognized name in Professional Hot Lather Machines for over 50 years. We are proud that our products are MADE IN USA and will offer years of superior service. Please follow the operating instructions below and simple mixing guide to ensure your Latherking continues to perform like new.

## MODEL MFS OPERATING INSTRUCTIONS

1. Plug machine into standard 110v outlet.
2. Remove lid and fill reservoir with soap solution (see mixing instructions) making sure not to overfill. Replace lid.
3. Turn on/off switch to the "on" position. Switch will illuminate when on. The machine should remain on during hours of operation.
4. Allow solution 20 minutes to heat up before using. (Cool soap will not produce desired lather).
5. Your new Latherking Model MFS offers a convenient "One Hand Operation". Depress the activation lever by placing your hand (palm up) on top of the lever and press down. Allow the desired amount of hot lather to dispense then remove your hand from the activation lever. (Note: During initial start-up, there may be a delay in the lather being dispensed. This is normal to allow the solution time to enter the dispensing chamber and create lather. Keep activation lever depressed until lather is dispensed.)
6. Apply hot lather to your customers face, neck or other area to be shaved and let them experience the greatest shaving experience known.
7. Turn on/off switch to the "off" position at the end of your operating hours.  
*Note: If there is any soap solution left in the reservoir overnight, mix well with finger before turning the machine back on the next day to blend any settling of concentrate.*

## DO NOT IMMERSE

### Proper mixing instructions for Campbell's Liquid Shave Cream

For best results always use Distilled or Purified Water. Do not use Hard Water.

### SHAKE BOTTLE OF CAMPBELL'S LIQUID SHAVE CREAM WELL UNTIL COMPLETELY MIXED

Campbell's Liquid Shave Cream is a highly concentrated formula. Please shake well. Mix 4 ounces (1/2 bottle) of Campbell's Liquid Shave Cream and 2 ounces (1/4 bottle) of Campbell's Latherking Cleaner with One Gallon of Distilled or Purified Water. Mix well to ensure all concentrate is blended fully with water. Shake Solution prior to filling the Latherking reservoir each time to blend any settling of concentrate. Foaming is normal. Solution can be made without using Campbell's Latherking Cleaner for a thicker lather. However, to keep your machine running at peak performance, please follow cleaning instructions and suggested maintenance as listed on the next page.

## Proper Cleaning Instructions and Suggested Maintenance

For best results, perform instructions below to clean and maintain the good working order of your Latherking Model MFS.

### Suggested Maintenance

If the soap solution (see page 1) is mixed using Campbell's Lathering Cleaner, the following cleaning instructions should be performed twice each month (more often depending on use). If the soap solution is mixed **without** Campbell's Latherking Cleaner, the following cleaning instructions should be performed **weekly** (more often depending on use).

1. Turn machine off.
2. Empty soap reservoir and wipe out with cloth or paper towel.
3. Add 4 caps full of Latherking Cleaner to the empty soap reservoir and 2-4 caps full of warm water. Turn machine on.
4. Hold cloth or paper towel under dispensing end and depress the activation lever several times until the cleaner solution is dispensed. **CAUTION: Cleaner solution may be hot. Use cloth or paper towel when dispensing during cleaning.**
5. Repeat if necessary.
6. Once completed, empty any remaining cleaning solution and refill the soap reservoir with soap solution and continue use.

Note: Only use Campbell's Liquid Shave Cream and Campbell's Latherking Cleaner (available from your favorite Barber or Beauty Supply). Using any other products may void the warranty and reduce performance.

Thank you for your purchase. We appreciate your business.
