

LatherKing

Valve Cleaning Brush Instruction

Your NEW LatherKing includes a cleaning brush intended to clear out minor blockages of soap residue in the valve opening. Occasionally, regular maintenance of your LatherKing is required to keep the interior mechanism and valve clean and operating in satisfactory condition (as indicated in your User and Care Guide). Soap can build up through normal use and using Campbell's Cleaner will keep the pathways clear of obstruction. If needed, the cleaning brush can be used to clear any blockage in the valve not resolved through normal maintenance.

Simply remove the cover from the soap reservoir, turn off the power and insert the cleaning brush into the top of the valve opening WHILE DEPRESSING THE ACTIVATION LEVER. *Slowly slide the brush up and down several times until the obstruction is clear.* Turn the power on and cycle the machine.

Keeping your LatherKing clean and free of soap build-up will ensure years of satisfaction for you and your customers!

4. Slowly Slide Brush Up and Down
